INDEX TO VOLUME XXXVIII

ADRENALIN, effect of on the heart-rate, 62.
Adrenin, effects of on splanchnic and peripheral arteries, 438.
Anaesthesia, spinal in the cat, 108.
Anasthetics, effect on coagulation of blood, 33.
Antithrombin, origin of, 233.
Arteries, effects of adrenin on, 438.
Auricle, effect on ventricular output, 406.

BACTERIA, killed by exposure to ultra violet, 401.
BENEDICT, F. G. and L. E. EMMES. A calorimetric calibration of the Krogh bicycle ergometer, 52.
Blood, coagulation of, 33.
—— pressure, influence on membrane manometer curves, 209.
——, sugar in, 269.
—— -sugar, in the dog, 415.
Blowfly larva, reactions to opposed beams of light, 313.
BURGE, W. E. and NEILL, A. J. The comparative rate at which fluorescent and non-fluorescent bacteria are killed by exposure to ultra-violet, 399.

CALCIUM, effect on cardiac and respiratory centers, 200.
—— phosphate, relation to osmotic properties of living cells, 456.
Cardiac center, effect of calcium and potassium on, 200.
CARLSON, A. J. and H. GINSBURG. Contributions to the physiology of the stomach. XXIV. The tonus and hunger contractions of the stomach of the new born, 29.
CARLSON, A. J., H. HAGER and M. P. ROGERS. Contributions to the physiology of the stomach. XXV. A note on the chemistry of normal human gastric juice, 248.
CARTER, E. P. See PEARCE and CARTER, 350.
Cerebrospinal fluid, secretion of, 93.
Chenopodium, influence of on the circulation and respiration, 67.
CHILLINGWORTH, F. P. See HENDERSON, CHILLINGWORTH and WHITNEY 1.
Circulation, effect of oil of chenopodium on, 67.
Coagulation of blood, 33.
CRILE, G. W. See MENTEN and CRILE, 225.

DAY, E. C. Photoelectric currents in the eye of the fish, 369.
Dead space, respiratory, 1, 20.
DENNY, G. P. and G. R. MINOT. The origin of antithrombin, 233.
Dog, blood-sugar in, 415.
Duodenum, acidity curves of, 191.

EMMES, L. E. See BENEDICT and EMMES, 52.
Ergometer, Krogh bicycle, calorimetric calibration of, 52.
Eye, photoelectric currents in the fish, 369.
EYSTER, J. A. E. See MEEK and EYSTER, 62.

FRAZIER, C. H. and M. M. PEET. Influence of diiodotyrosine and iodothyrine on the secretion of cerebro-spinal fluid, 93.

GAINES, W. L. A contribution to the physiology of lactation, 285.
Gastric juice, chemistry of, 248.
GESSEL, R. The effects of change in auricular tone and amplitude of auricular systole on ventricular output, 406.
GINSBURG, H. See CARLSON and GINSBURG, 29.
Glycosuria, Studies in experimental, 415, 425.

HAGER, H. See CARLSON, HAGER and ROGERS, 248.
HALDANE, J. S. The variations in the effective dead space in breathing, 20.
HARDT, L. L. J. See ROGERS and HARDT, 274.
HARTMAN, F. A. The differential effects of adrenin on splanchnic and peripheral arteries, 438.
Heart-rate, effect of adrenalin on, 62.
HENDERSON, Y., F. P. CHILLINGWORTH and J. L. WHITNEY. The respiratory dead space, 1.
HOOKER, D. R. The perfusion of the mammalian medulla: The effect of calcium and of potassium on the respiratory and cardiac centers, 200.
Hydrogen ion concentration in blood, 225.
——, methods of determining, 180, 186.
Hypophysis, influence on the secretion of saliva, 339.

KIDNEY, gaseous metabolism of, 350.

LACTATION, physiology of, 285.
LEWIS, M. R. Rhythmical contraction of the skeletal muscle tissue observed in tissue cultures, 153.
Light, reactions of blowfly larva to, 313.
LIVINGSTON, A. E. See SALANT and LIVINGSTON, 67.
Liver, sugar retaining power of, 425.
LOMMEN, P. A. See SOLEM and LOMMEN, 339.

MACLEOD, J. J. R. and R. G. PEARCE. Studies in experimental glycosuria. IX. The level of the blood-sugar in the dog under laboratory conditions, 415.
——. Studies in experimental glycosuria. X. The sugar retaining power of the liver in relationship to the amount of glycogen already present in the organ, 425.
Magnesium phosphate, relation to osmotic properties of living cells, 456.
Mammalian medulla, perfusion of, 200.
Manometer membrane interpretation of, as affected by variations in blood pressure, 209.
MARTIN, E. G. and W. L. MENDENHALL. The response of the vasodilator mechanism to weak, intermediate, and strong sensory stimulation, 98.
McCLENDON, J. F. Acidity curves in the stomachs and duodenums of adults and infants, plotted with the aid of improved methods of measuring hydrogen ion concentration, 191.
——. A direct reading potentiometer for measuring hydrogen ion concentrations, 186.
——. New hydrogen electrodes and rapid methods of determining hydrogen ion concentrations, 180.
——. The action of anesthetics in preventing increase of cell permeability, 173.
——. The preservation of the life of the frog's egg and the initiation of development, by increase in permeability, 163.
MEEK, W. J. and J. A. E. EYSTER. The effect of adrenalin on the heart-rate, 62.

MEIGS, E. B. The osmotic properties of calcium and magnesium phosphate in relation to those of living cells, 456.

MENDENHALL, W. L. Factors affecting the coagulation time of blood. VII. The influence of certain anesthetics, 33.

——. See MARTIN and MENDENHALL, 98.

MENTEN, M. L. and G. W. CRILE. Studies on the hydrogen ion concentration in blood under various abnormal conditions, 225.

MINOT, G. R. See DENNY and MINOT, 233.

Muscle, rhythmical contraction of, in tissue cultures, 153.

NEILL, A. J. See BURGE and NEILL, 399.

OSMOTIC properties of living cells, 456.

PAIN, nervous paths of, in spinal cord, 128.

PATTEN, B. M. An analysis of certain photic reactions, with reference to the Weber-Fechner Law. I. The reactions of the blowfly larva to opposed beams of light, 313.

PEARCE, R. G. See MACLEOD and PEARCE, 415.

——. See MACLEOD and PEARCE, 425.

—— and E. P. CARTER. The influence of the vagus nerve on the gaseous metabolism of the kidney, 350

PEET, M. M. See FRAZIER and PEET, 93.

Permeability, action of anesthetics in preventing increase of, 173.

——, of frog's egg, 163.

Photoelectric currents, in the eye of the fish, 369.

PILCHER, J. D. An interpretation of the membrane manometer curves as affected by variations in blood pressure, 209.

PORTER, W. T. See SMITH and PORTER, 108.

Potassium, effect on cardiac and respiratory centers, 200.

RANSOM, S. W. and C. L. VON HESS. The conduction within the spinal cord of the afferent impulses producing pain and the vasomotor reflexes, 128.

Respiratory center, effect of calcium and potassium on, 200.

——, dead space, 1, 20.

Respiration, effect of calcium and potassium on, 200.

——, effect of oil of chenopodium on, 67.

ROGERS, F. T. and L. L. J. HARDT. Contributions to the physiology of the stomach. XXVI. The relation between the digestion contractions of the filled, and the hunger contractions of the "empty" stomach, 274.

ROGERS, M. P. See CARLSON, HAGER and ROGERS, 248.

SALANT, W. and A. E. LIVINGSTON. The influence of the oil of chenopodium on the circulation and respiration, 67.

Saliva, secretion of, 339.

SCHEAR, E. W. E. The content of sugar in the blood of cats under influence of cocain, 269.

SMITH, G. G. and W. T. PORTER. Spinal anaesthesia in the cat, 108.

SOLEM, G. O. and P. A. LOMMEN. The influence of the extract of the posterior lobe of the hypophysis upon the secretion of saliva, 339.

Stomach, acidity curves of, 191.

——, hunger contractions of, 274.

——, the tonus and hunger contractions of, 29.

Sugar, content of in the blood of cats under cocaine, 269.

THYROID, changes in the blood flow through the gland, 356.

VAGUS, influence of, on the gaseous metabolism of the kidney, 350.
Vasodilator mechanism, response to weak, intermediate and strong sensory stimulation, 98.
Vasomotor reflexes, nervous paths of, in spinal cord, 128.
Ventricle, effect of auricular tone on output of, 406.
Von Hess, C. L. See Ransom and Von Hess, 128.

WATTS, C. F. Changes in iodine content of the thyroid gland following changes in the blood flow through the gland, 356.
Whitney, J. L. See Henderson, Chillingworth and Whitney, 1.

CONTENTS

PAGE

STUDIES IN EXPERIMENTAL GLYCOSURIA. IX. THE LEVEL OF THE BLOOD-SUGAR IN THE DOG UNDER LABORATORY CONDITIONS. *By J. J. R. Macleod and R. G. Pearce* . 415

STUDIES IN EXPERIMENTAL GLYCOSURIA. X. THE SUGAR RETAINING POWER OF THE LIVER IN RELATIONSHIP TO THE AMOUNT OF GLYCOGEN ALREADY PRESENT IN THE ORGAN. *By J. J. R. Macleod and R. G. Pearce* 425

THE DIFFERENTIAL EFFECTS OF ADRENIN ON SPLANCHNIC AND PERIPHERAL ARTERIES. *By Frank A. Hartman* 438

THE OSMOTIC PROPERTIES OE CALCIUM AND MAGNESIUM PHOSPHATE IN RELATION TO THOSE OF LIVING CELLS. *By Edward B. Meigs* 456

INDEX 491

VOL. XXXVIII—No. 4

Issued October 1, 1915

BALTIMORE, U. S. A.

1915

Entered as second class matter, August 18, 1914, at the Post Office at Baltimore, Md., under the act of March 3, 1879

UNIQUE DIAGNOSTIC AGENTS AND APPLIANCES

Phenolsulphonephthalein Ampules. Renal functional test.

Phenoltetrachlorphthalein. A new liver functional test.

Urease-Dunning. For the rapid and accurate estimation of urea, in urine and in blood.

Colorimeters. For Phenolsulphonephthalein. Rowntree and Geraghty Modification of Hellige, and the Dunning.

Keidel Vacuum Bleeding Tube. For obtaining specimens for the Wassermann and other blood reactions. Convenient and protective.

Blood Culture Keidel Tube. Containing medium.

THE WAVERLY PRESS
BALTIMORE, U. S. A.

THE AMERICAN JOURNAL OF PHYSIOLOGY is issued monthly by the American Physiological Society under the direction of the Council of the Society. There are at present from two to three volumes yearly, each of about five hundred pages. The price of one volume, postage free, is five dollars to subscribers in the United States and Canada and five dollars and twenty-five cents to subscribers in other countries. All subscriptions are payable in advance.

Articles submitted for publication may be sent, preferably by registered mail, to the Managing Editor, Dr. D. R. Hooker, Johns Hopkins Medical School, corner of Washington and Monument Streets, Baltimore, Md., or to any member of the Council. All business communications should be sent to the Managing Editor.

COUNCIL OF THE SOCIETY, 1915

W. B. CANNON
JOSEPH ERLANGER
W. E. GARREY
C. W. GREENE
W. H. HOWELL
J. R. MACLEOD
W. J. MEEK

CONTRIBUTORS ARE REQUESTED TO OBSERVE THE FOLLOWING SUGGESTIONS.

1. While the length of articles cannot be specified, they should not run to excessive length especially by inclusion of unessential tables and protocols which add materially to the cost of publication.

2. Each article should conclude with a brief summary of results, suited to the needs of reference journals.

3. Reference to literature cited should contain, first, the name of the author or authors; second, the name of the journal or book; third, the year; fourth, the volume number and fifth, the page. Thus, Meltzer: American Journal of Physiology, 1908, xxi, 449. References should be numbered serially and be gathered at the end of the paper.

4. All figures for illustration should be submitted in such form as to admit of photographic reproduction without retouching or redrawing. These latter procedures are expensive and are liable to error.

Tracings on smoked paper reproduce well if the white lines are distinct and separate and the background is uniform black. Authors may safely retouch breaks or weak spots in the white lines with white ink and fill in the background with India ink. Letters and symbols should be clear and legible.

Curves laid on ordinate paper should be in India ink. Background lines in blue will not reproduce; red, yellow and green will reproduce black. Plotted curves and drawings yield better results if the originals are large enough to permit a very considerable reduction (two to fourfold) in the plate used for illustration.

Unless specific instructions are given by authors, the printer will be allowed to use his judgment in determining the amount of reduction on all figures. In general such reduction will conform to the journal page so that the reader views the figure and legend without change of position.

Manuscripts, and particularly figures, should be carefully protected by a stiff board against injury when sent by post or express.

BIOLOGICAL PRODUCTS

manufactured by

PARKE, DAVIS & COMPANY.

SERUMS.

Antidiphtheric Serum Concentrated (Globulin).
Antigonococcic Serum.
Antimeningitic Serum.
Antistreptococcic Serum.
Antitetanic Serum.
Antitubercle Serum.

BACTERIAL VACCINES.

Acne Vaccine.
Acne Vaccine, Combined.
Catarrhal Vaccine, Combined.
Colon Vaccine.
Combined Bacterial Vaccine (Van Cott).
Furunculosis Vaccine.
Gonococcus Vaccine.
Gonorrheal Vaccine, Combined.
Meningococcus Vaccine (Prophylactic).
Pertussis Vaccine.
Pertussis Vaccine, Combined.
Pneumococcus Vaccine.
Staphylococcus Vaccine, Albus.
Staphylococcus Vaccine, Aureus.
Staphylococcus Vaccine, Citreus.
Staphylococcus Vaccine, Combined.
Streptococcus Vaccine.
Urethritis Vaccine, Combined.
Typhoid Vaccine (Prophylactic).
Typhoid-Paratyphoid Vaccine (Prophylactic).

SMALLPOX VACCINE.

Vaccine (Glycerinated).
Vaccine Points.

TUBERCULINS.

Purified Tuberculin Discs.
Tuberculin, B. E.
Tuberculin, B. F.
Tuberculin, Old.
Tuberculin, T. R. (Concentrated).
Tuberculin, T. R. (Dilute).
Tuberculin for the Von Pirquet Test.
Tuberculin Ointment for the Moro Test.
Tuberculin Tablets, B. E.
Tuberculin Tablets, T. R.

PHYLACOGENS.

Erysipelas Phylacogen.
Gonorrhea Phylacogen.
Mixed Infection Phylacogen.
Pneumonia Phylacogen.
Rheumatism Phylacogen.
Typhoid Phylacogen.

MISCELLANEOUS.

Adrenalin Products.
Anterior Lobe of Pituitary Body, Desiccated.
Antidiphtheric Globulins, Dry.
Antitetanic Dusting Powder.
Antitetanic Globulins, Dry.
Bacillus Bulgaricus Tablets.
Coagulose.
Corpora Lutea, Desiccated.
Erysipelas and Prodigiosis Toxins (Coley).
Gonococcus Antigen.
Lactone (Buttermilk Tablets).
Luetin.
Parathyroid Glands, Desiccated.
Pasteur Antirabic Vaccine (Cumming).
Pineal Glands, Desiccated.
Pituitrin (Pituitary Extract).
Pyorrhea Alveolaris Vaccine (Harris).
Suppositories Lactic Acid Bacteria.
Suprarenal Glands, Desiccated.
Suprarenal Liquid with Chloretone.
Thymus Glands, Desiccated.
Thyreoidectin.
Thyroid Glands, Desiccated.
Thyroprotein (Beebe).
